

Fish Data Summary (2013 Fish)

- We have not observed changes in fish tissue concentrations that are outside of expectations
- Dredging related PCB increases rapidly return to baseline levels, and are expected to decline thereafter following remediation
- Dredging program is not the only factor in this system influencing PCB concentrations
 - Natural variability of the system
 - Flooding, storms, flow conditions
- Continue to evaluate historic data (NYS) with more recent dredging program data
- Annual Monitoring will continue
